

Manual HDD ways to format

"The best choice in memory & data storage solutions"

How to format your Hard Disk Drive with the chance of getting your data back or without getting your data back:

- Click with your left mouse button on the windows search bar:

- Make sure your hard drive has a volume. If you have a volume on your hard drive continue at B.

A. creating a volume

- Right click the storage bar of the hard drive and click: New Simple Volume... New Spanned Volume... New Striped Volume... Properties - Click next twice. - Here you can assign a driver letter, then click next. Help Format this volume with the following settings: File system: NTFS exFAT Allocation unit size: NTFS - From here you can directly format your disk to New Volume Volume label: any format. (for example: FAT32, exFAT of NTFS)

- You can give the disk a name and choose if you want to quick format (with the possibility of getting your data back) or you turn of quick format. (the data can not be recovered)

Perform a quick format

(BE AWARE! THIS PROCES CAN TAKE A LONG TIME!)

-Then click "next" --> "finish" and wait untill the format is done.

B. Formating a existing volume

- Right click the storag	ge bar of the hard drive:	Op Ex	pen plore						
		M	ark Partition as Active aange Drive Letter and	Paths					
- Here you can choose the file system (FAT32, exFAT of NTFS), give your drive a new name and choose if the disk gets a quick format (with possibility of data recovery) or turn off		Format Extend Volume Shrink Volume Delete Volume Properties							
					quick format. (data c	ant be recovered)	п	21p	_
					Format this volume with the	e following settings:	(5.5		
File system:	NTFS ~	(BE AWARE! THIS PROCES CAN TAKE A LO							
Allocation unit size:	exFAT NTFS								
Volume label:	New Volume		Format D:						
			Volume label:	850EVO					
- Press ok once and	read the tekst properly, and	d	File system:	NTFS					
when you agree click ok again.			Allocation unit size:	NTFS					

That is all there is to it!
